## Fruit Data\*

Genotype	<sup>0</sup> Bx	Fruit size (g)	Yield (kg/plant)
Glen Ample	9.2	5.4	3.8
Glen Doll	11.1	4.6	3.8
Glen Fyne	10.4	5.0	4.5
Tulameen	12.2	5.1	2.1

Data taken over three years at SCRI

Glen Ample is a mid season raspberry suitable for both the fresh and processing market.

**Disease and Pest Resistance:** Glen Ample has the gene A1, giving resistance to 2 biotypes of the large raspberry aphid (*Amphorophora idaei*). Glen Ample is susceptible to *Phytophthora* root rot but more tolerant than Glen Moy. It is also susceptible to the cane diseases cane botrytis, spur blight and cane blight. Glen Ample is also susceptible to raspberry bushy dwarf virus.

**Field Characteristics:** Trials at SCRI showed yields of 7 – 10 t/ha, with fruit size being between 4g – 6g. Glen Ample is a spine free variety with long and upright laterals. Has an excellent overall presentation.

**Fruit Characteristics:** Bright red in colour with a lovely aromatic and sweet flavour. Excellent shelf life.
