

Glen Magna

raspberry

Glen Magna is a high yielding, late main season cultivar which produces very large meaty fruit, conical in shape.

Breeder: SCRI

Parentage: Meeker x SCRI 7719B11.

Disease and Pest Resistance: Glen Magna has the gene Bu, giving resistance to the common strain of raspberry bushy dwarf virus. It also carries the gene A1, conferring resistance to 2 biotypes of the large raspberry aphid (*Amphorophora idaei*).

Market: Glen Magna makes an excellent cultivar for the amateur market due to its large attractive fruit and aromatic flavour.

Fruit Characteristics: Glen Magna produces very large meaty fruit, 6.5g to 7g in size and conical in shape. Fruit is bright red and has a sweet aromatic flavour.

Field Characteristics: Glen Magna has very vigorous canes with large cane diameter. Laterals are long and upright. Dense spines at base of cane, very few spines at cane tip. Overall presentation is excellent.
